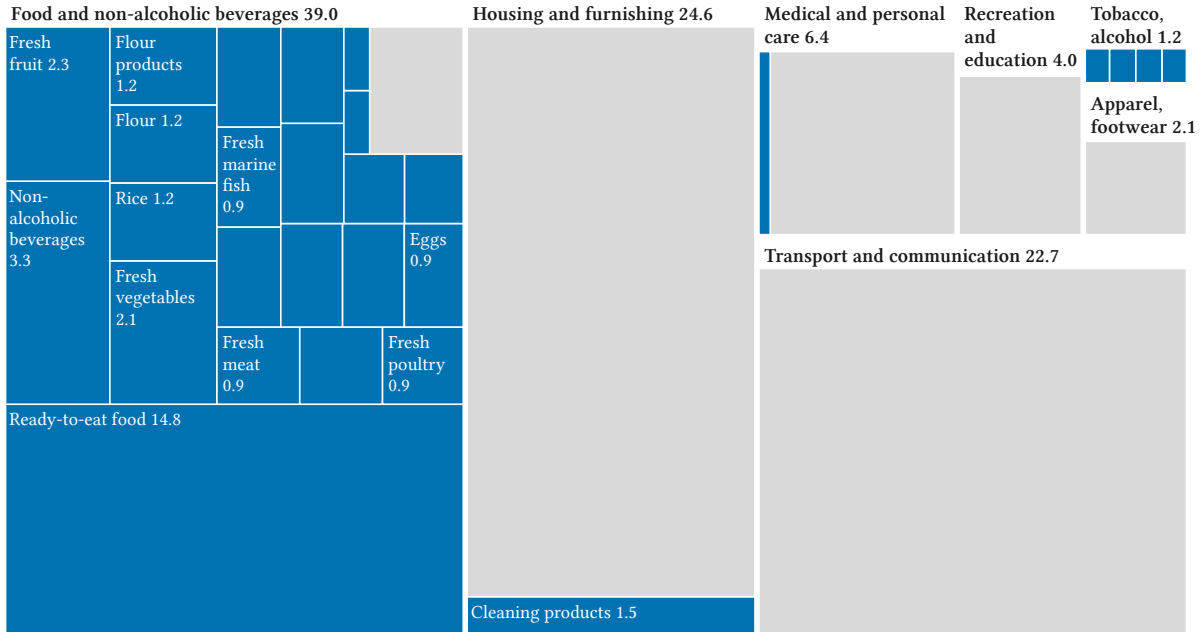
Packaged-product items make up 40% of the CPI basket; 92% of that is food



Source: TPSO consumer price indices and weights (base 2566); author's calculations.

Note: Area: price-updated CPI weight (% of headline). Blue: the 28 items in the classifier's scope; grey: the rest of each division. The 16 smallest are unlabelled; the appendix lists every item. Item weights inside an official weight cell are an equal split (estimated).
